MIDWEST CHASSIS

7-37 PARTS LIST

Revised July 24, 2014

Mike Simpson

THE MIDWEST RADIO CORP.

Cincinnati, Ohio.

LIST OF TUBE VOLTAGES OF
1937 MODEL 7 TUBE RECEIVER AC -DC

ALL TESTS MADE WITH NO SIGNAL INPUT

TYPE	POSITION	PLATE VOLTS	SCREEN VOLTS	SUPP. VOLTS	CATHODE VOLTS	FIL VOLTS
6A8	(Mixer (Osc.)	120 100	80	0	.6	5.3
6K7	1st I.F.	120	80	0	0	5.3
6H6	2nd Det.	0	-	-	0	5.3
6F5	1st Audio	50	0	0	0.3	5.3
25A6	Output	120	120	0	15	25
25Z6 B+ SUPPLY	Rect.	115 AC	-	-	136	25
25Z6 FIELD SUPPLY	Rect.	115AC	-	-	120	25

Line Voltage 115 Volts 60 cycles. No signal applied.

Vacuum Tube Volt Meter used on all measurements from chassis ground
Voltages plus or minus 15% depending on line voltage.

NOTES
I.F. Frequency 456 KC

INSTRUCTIONS FOR ALIGNING THE MIDWEST 7-37 AC-DC RECEIVER

A good signal generator with accurate frequency calibration and an output meter are required. An intermediate frequency of 456 k.c. is used.

- (1) Set the signal generator to 456 k.c.
- (2) Be sure that set is not tuned to a station.
- (3) Connect the output meter from the plate of the output tube to positive B.
- (4) Using a moderately weak signal approximately 60 microvolts, align the two I.F. transformers to maximum gain.
- (5) Keep decreasing the oscillator input and realigning for maximum gain.

This completes the alignment of the I.F. amplifier.

Connect the signal generator between antenna and ground. Connect mixer grid lead to grid of mixer tube.

- (1) Set the wave change switch to the "A" band.
- (2) Set the signal generator to 1490 k.c.
- (3) Adjust the "A" oscillator trimmer to maximum gain, then adjust the "A" band mixer trimmer for maximum gain.
- (4) Reset the signal generator to 550 k.c. and rotate the receiver dial to 550 k.c.
- (5) Adjust the "A" band padder for maximum signal.
- (6) Repeat the adjustment of trimmers and padders until the adjustment of one does not effect the adjustment of the other.

This completes the alignment of the "A" band.

- (1) Set the wave change switch to the "B" band.
- (2) Set the signal generator to 12 m.c.
- (3) Adjust the "B" oscillator trimmer to maximum gain then adjust the "B" band mixer for maximum gain.

This completes the alignment of the "B" band.

INSTRUCTIONS FOR ALIGNING THE MIDWEST 7-37 AC-DC RECEIVER

SHORT WAVE RECEIVER

- (1) Set the wave change switch to the "C" band.
- (2) Set the signal generator to 4 m.c. Set dial at 75.
- (3) Adjust the "C" oscillator trimmer to maximum gain
adjust the "C" band mixer trimmers for maximum gain
- (4) Reset the signal generator to 2 m.c. and rotate the receiver dial to 16.
- (5) Adjust the "C" band padder for maximum signal.
- (6) Repeat the adjustment of trimmers and padders until the adjustment of one does not effect the adjustment of the other.

This completes the alignment of the "C" band S.W.

LONG WAVE RECEIVER

- (1) Set the wave change switch to the "E" band.
- (2) Set the signal generator to 325 k.c.
- (3) Adjust the "E" oscillator trimmer to maximum gain, then adjust the "E" band mixer trimmers for maximum gain.
- (4) Reset the signal generator to 150 k.c. and rotate the receiver dial to 150 k.c.
- (5) Adjust the "E" band padder for maximum signal.
- (6) Repeat the adjustment of trimmers and padders until the adjustment of one does not effect the adjustment of the other.

This completes the alignment of the "E" band L.W.
